

# FACILITATOR

## Financial Assistance Workflow Automation

### Rapidly Build Your Future Financial Assistance Solutions

Our financial assistance solution automates many of the steps associates perform in pursuing 3rd party benefits for your self-pay patients. We allow our clients and B2B partners to configure their best practices and privately-label the finished product. This includes mobile apps and portal websites used to connect with the patient and facilitate improved outcomes.

- Privately label our solution...shorten your time to market by leveraging our existing platform for your specific needs
- Find alternative funding sources for patients' medical bills
- Support financial screening bedside, remotely, and in the field to maximize patient engagement
- New patient portals and mobile apps will enable a patient to upload photos of key supporting documents, manage their tasks, and establish virtual sessions with online advocates
- Segment and distribute work assignments between internal teams and external partners
- Increase conversion rates for outpatient and discharged ER patients through improved patient engagement
- Stop writing off out-of-state Medicaid accounts...capture this valuable reimbursement instead
- Collect payment, set up payment plans, or arrange financing to resolve patient balances for patients that do not qualify for other benefits
- Keep associates accountable through performance-based and peer-comparison reporting
- Maintain a centralized workflow across multiple systems and disparate systems
- Real-time, bi-directional updates to eliminate reconciliation challenges
- Sales and onboarding support
