

ActiveXCHANGE

Your Digital Mailroom for Healthcare

A bi-directional gateway that efficiently manages incoming objects and transforms them into actionable information. Delivering them in virtually any format to their ultimate destination.

Achieve Interoperability with ActiveXCHANGE

ActiveXCHANGE is a comprehensive, centralized, paperless solution for efficiently managing all documentation, images, and data feeds electronically. It provides a single, consistent interface for scheduling and pre-arrival by consolidating information from any source, including:

- Multiple Scheduling Systems
- Custom Interfaces
- HL7
- Web-Based Requisition Systems
- EMRs
- Faxes
- Direct Messaging
- Email
- Hard Copies
- Verbal Appointments

This information can then be sent between physicians, affiliated organizations, remote workers, payers and patients via ActiveXCHANGE.

Common use cases for ActiveXCHANGE include mailroom automation, orders/referral management, pre-arrival management, appeals management, messaging, release of information, transitioning staff off site to work-from-home positions.

ActiveXCHANGE can be bundled with our messaging platform to add automated voice message (TTS), text, e-mail, pagers, fax, and traditional mail to create a physician and patient outreach engine for alerts, reminders, requests for information, and post-acute care follow-up.
